

Embedding HUB Tools on Your Website

Empower your organization to seamlessly connect individuals to vital social and community resources.

Connecting to the HUB: The Iowa Community HUB simplifies and expands access to social and health services across the state. Healthcare organizations have options making it easier for their staff to find and refer individuals/patients to appropriate community programs and resources.

1. **‘Make A Referral’:** Use the ‘Make A Referral’ button on the HUB website to send individual/patient information to a HUB Navigator, who will find and coordinate community resources on your behalf.

<https://iacommunityhub.org/referral/>

2. **There are two ways you could add this to your own website:**

- a. Add a link to the *Patient Referral Form* on your homepage. You might title the link “Refer a Patient” or “Make a Referral”.

1. Provider link should point to the form at: <https://forms.office.com/r/LUgdMPXiUh>

2. Patient link for self-referral to the form at: <https://forms.office.com/r/twW95rLB74>

- b. Embed the form directly in your website to allow staff to refer patients without navigating away from your own website (a more seamless referral process). You can embed the iframe on an existing page area with the appropriate space, or you might have a link titled "Refer a Patient" or "Make a Referral" and the link would go to one of your own pages with your site's heading and the iframe. In either case embed the following code:

1. Provider link should point to the form at:
`<iframe src="https://forms.office.com/r/LUgdMPXiUh" width="100%" height="800"></iframe>`

2. Patient link for self-referral should point to the form at:
`<iframe src="https://forms.office.com/r/twW95rLB74" width="100%" height="800"></iframe>`
